Abhishek Kumar Maurya

Staff Software Engineer — Backend, Distributed Systems & Identity Platform Engineering

Hyderabad, India +917842740174 akm.nitt@gmail.com github.com/xpressabhi linkedin.com/in/akm85

Immediately available; open to in-office, hybrid, or remote roles from Hyderabad

SUMMARY

Staff Software Engineer with 16+ years building backend and distributed systems at enterprise scale (Hyderabad). I design, build, and operate reliable platform services on the critical path — most recently the Agentic Developer Platform at ServiceNow, serving 20+ teams and 7 pilot squads with governance, telemetry, and production support. Strengths: backend engineering (Node.js, Java, Python), distributed systems and microservices patterns, databases/REST APIs, and operational excellence — reliability, scalability, observability, testing, and incident response — leading 2–3-engineer workstreams within a 9-person team and owning projects end-to-end from ambiguous problem to production.

SKILLS

BACKEND & DATA
Node.js, Java, Python, JavaScript (ES6+), REST APIs, Distributed systems, Microservices, Databases, MongoDB, SQLite, Oracle Database, SQL / PLSQL

RELIABILITY & QUALITY
Jest, React Testing Library, Playwright, Performance optimization, WCAG / ARIA accessibility, Testing, monitoring, and incident response

OBSERVABILITY
Sentry, LogRocket, Datadog, Sumo Logic, Telemetry, Logging & monitoring

ARCHITECTURE
System design, Scalable architecture, Design patterns, Distributed systems, Microservices at scale, Data modeling, Metadata-driven development

CI/CD & TOOLING
GitHub Actions, Jenkins, Docker

FRONTEND & PLATFORM
TypeScript, React, Next.js, Redux Toolkit, RTK Query, Webpack, Vite

AI & AGENTIC ENGINEERING
MCP workflows, LLM APIs (Anthropic, OpenAI, Gemini), Agent workflows, Tool orchestration

WORK EXPERIENCE

Staff Software Engineer · ServiceNow, Hyderabad

Oct 2023 – Present

Node.js, Java, Python, JavaScript, React, MCP, REST APIs, Distributed systems

- Design, build, and evolve backend systems for a multi-team platform on the critical path for 20+ teams (7 pilot squads) — own projects end-to-end: clarify requirements, drive technical design, implement solutions, manage rollout, and support production.
- Founded the Agentic Developer Platform (ADP), a multi-team bootstrap and governance infrastructure for MCP servers, agents, and skills; built in 4 weeks on a multi-agent orchestration pattern and rolled out to 7 pilot squads with 20+ skills, 20+ agents, and 20+ teams.
- Improved reliability, scalability, observability, and operational readiness: telemetry and governance with cost/adoption metrics — reduced case task resolution time by 90%, cut automation development from days to hours on legacy codebases, lifted legacy test coverage from 20% to 90%, and reduced external defects by 90%.
- Contributed to Build Agent in ServiceNow Studio — metadata-aware, multi-model platform across 35+ metadata types and 11 domains; enforced security guardrails, human-in-loop approval gates, and ACL-aware generation (tables, business rules, ACLs, UI layouts) with self-healing via the Automated Test Framework.
- Led the ALA Release Lifecycle Documentation Agent and App Summary Agent (Now Assist for Creator): automated delta analysis and CAB-ready deployment manifests on the REAct agentic framework — documentation time from hours to a single click; ships as the Release lifecycle documentation agent in Now Assist for Creator.
- Lead a 9-person engineering team as tech lead; lead execution for 2–3-engineer workstreams including task breakdown, technical guidance, and code reviews — plus mentoring, technical hiring, and high-bar architectural reviews; enabled teams to set up ADP skills, agents, rules, and MCP servers in a single cross-team onboarding session.
- Drove production quality, observability, and operational excellence: established enterprise testing strategy with Jest, React Testing Library, and Playwright; performance optimization and WCAG/ARIA accessibility; debugged production issues, participated in incident response, root-cause analysis, and long-term fixes.
- Partnered with Product, Design, and Engineering to scope, build, test, and launch platform improvements; make sound trade-offs between speed, quality, and long-term maintainability in a fast-moving environment and communicate reasoning clearly to cross-functional stakeholders.

Senior Software Engineer · Rippling, Bengaluru
Oct 2022 – Aug 2023

JavaScript, React, TypeScript, Node.js, Python, Playwright, Sentry, LogRocket

— Contributed to frontend infrastructure and global engineering initiatives; identified codebase problem areas, drove improvement proposals, interviewed candidates, and mentored junior engineers.

Lead Engineer · Reputation, Hyderabad
Sep 2020 – Sep 2022

JavaScript, Node.js, React, Python, RTK Query, Sumo Logic

— Led the Actions Team frontend, migrating the application from Angular to React and cutting page load time in half.
— Delivered the Actions feature and management dashboard; raised accessibility compliance from 80% to 95% for a broad user base.
— Built maintainable, scalable, and testable features; mentored junior developers and reviewed code.

Co-Founder / Lead Developer · Worktech Software, Hyderabad
Jul 2017 – Aug 2020

JavaScript, Node.js, MongoDB, Meteor, REST APIs

— Built products and services using JavaScript, Node.js, MongoDB, Meteor, and REST APIs.
— flexzone.in (2018–2020): aggregator of cafés into coworking spaces.
— hospeto.in (2017–2018): video consultation platform for doctors, with health record and billing management.

Senior Developer · Eze Software Group, Hyderabad
Jun 2016 – Jun 2017

REST APIs, MS SQL

— Developed and improved an order-management system for real-time trading related to short selling.
— Maintained EzeLocate and DataFeed for locating short inventory and real-time stock-data processing.

Project Leader · Oracle, Hyderabad
Jun 2010 – May 2016

Java, Oracle Database, Oracle ODI, SQL/PLSQL

— Built and operated reliability- and security-sensitive HRMS production systems (Plan Copy, Benefits Relationships) on Java, Oracle Database, Oracle ODI, and SQL/PLSQL — including patented approach for importing tested objects into production (US20150046358).
— Completed the Benefit Plan Copy project, reducing test-to-production HRMS data setup time by 80% while preserving production integrity.

SELECTED AI WORK

Agentic Developer Platform (ADP) `ServiceNow · Founder` — Multi-team bootstrap and governance infrastructure for Claude Code, MCP servers, agents, and skills. Built in four weeks on a multi-agent orchestration pattern, rolled out to 7 pilot squads across 20+ teams with 20+ skills and 20+ agents.

MCP-driven engineering workflows `ServiceNow · 20+ teams` — Integrated MCP-driven agentic workflows into the engineering lifecycle organization-wide. Reduced research and debugging effort by approximately 95% while improving accuracy.

Build Agent, ServiceNow Studio `ServiceNow · App Engine` — Elevated App Engine with agentic workflows for AI-assisted application creation, flow generation, and tool orchestration across 35+ metadata types and 11 domains. Built on the planning pattern — think first, then execute — with a metadata-aware, multi-model (Claude default; Now LLM + Claude on Bedrock), self-healing agentic architecture.

Release lifecycle & app summary agents `ServiceNow · Now Assist for Creator` — Automated delta analysis, human-readable release notes, and CAB-ready deployment manifests — documentation time from hours to a single click. Built on the REAct agentic framework (reason → act → observe). Ships as the Release lifecycle documentation agent in Now Assist for Creator.

PROJECTS

SpendIQ Copilot `(live)` — Conversational spend-analysis agent: LangGraph ReAct over SQLite + FTS5 with SQL guardrails (SELECT-only, read-only connections), an AST-whitelisted calculator instead of eval, and a 14-case golden-set eval harness with majority voting — all passing

ordo `(live)` — Ordo: on-device vision-language model — Qwen2-VL-2B on llama.cpp across a GGUF quantization ladder, deployed to iPhone (A16), with a private photo eval set, per-stage TTFT decomposition, and LoRA accuracy recovery

selftest.in `(live)` — Self-testing and government job preparation app powered by the Gemini API

lifetimetax.vercel.app `(live)` — Lifetime tax liability calculator

airoadtripplanner.vercel.app `(live)` — AI-powered road trip planner

faang-cv.vercel.app `(live)` — CV builder tuned for FAANG-style applications

EDUCATION

National Institute of Technology (NIT), Tiruchirappalli — Master of Computer Applications (MCA) · 2007–2010

Banaras Hindu University (BHU), Varanasi — BSc (Hons), Mathematics · 2003–2006

Abhishek Kumar Maurya · Hyderabad, India
