

Abhishek Kumar Maurya

Staff AI Engineer (Agents) / Frontend & Full-Stack — agent architectures, React/TypeScript UIs, forward-deployed delivery

Hyderabad, India +917842740174 akm.nitt@gmail.com github.com/xpressabhi linkedin.com/in/akm85

SUMMARY

Staff Frontend / Full-Stack Engineer with 16+ years across React, TypeScript, and Node.js, now focused on AI agent interfaces and forward-deployed delivery. Founded ServiceNow's Agentic Developer Platform frontend and enablement motion (adopted by 20+ teams via hands-on onboarding), lead a 9-person engineering team, and ship enterprise-grade UI with testing and accessibility. Ex-co-founder with direct client delivery experience. Design agent systems end-to-end: tool contracts and orchestration, eval-gated rollout (golden sets, LLM-as-judge), and governance via AI Agent Studio — shipped ALA from requirements to GA.

SKILLS

FRONTEND & PLATFORM

JavaScript (ES6+), TypeScript, React, Next.js, Redux Toolkit, RTK Query, Node.js, Webpack, Vite, PWA

AI & AGENTIC ENGINEERING

AI agents, Agent UIs, MCP workflows, Claude Code, LLM APIs (Anthropic, OpenAI, Gemini), LangChain / LangGraph, Prompt engineering, Tool orchestration, Multi-model systems, Multi-agent orchestration, REAct agents, LLM evals (golden sets, LLM-as-judge), Agent evaluation & guardrails, AI governance (AI Agent Studio / Control Tower), RAG / keyword retrieval (BM25, FTSS)

ARCHITECTURE

System design, Scalable frontend architecture, Design patterns, Developer productivity, Metadata-driven development

RELIABILITY & QUALITY

Jest, React Testing Library, Playwright, Performance optimization, WCAG / ARIA accessibility

BACKEND & DATA

Python, FastAPI, SQLite, Java, REST APIs, MongoDB

CI/CD & TOOLING

GitHub Actions, Jenkins, Docker

OBSERVABILITY

Sentry, LogRocket, Datadog, Sumo Logic

WORK EXPERIENCE

Staff Software Engineer • ServiceNow, Hyderabad

Oct 2023 – Present

React, TypeScript, JavaScript, Node.js, AI Agents, MCP, Python

- Stabilized inherited Table Builder (UI/API fixes); grew entry points 1→4: standalone homepage, legacy table/form-builder entry, App Engine, ServiceNow Studio.
- Same for Workspace Builder: inherited, mostly built; owned Studio support and UI/API fixes.
- Designed ALA's agent architecture (tool contracts, delta-analysis flow, eval checks); built requirements to delivery; EA Mar 2026, GA Apr 2026; one-click release notes and update-set descriptions, CAB-ready.
- Set the consolidation architecture: App Summary from Now Assist skills to AI Agent Studio; one generic flow replacing 4-provider settings (Now LLM, Gemini, OpenAI, Anthropic) — less maintenance, smaller monthly model-change test surface.
- Legacy test coverage for update sets + source control + team dev: <20% to 95%, Feb–Mar 2026 in 4 weeks, using ADP; demoed to 7 teams, 20+ teams adopted.
- Tech-lead 9-dev team on 2-week sprints (~8 team-wide customer cases/sprint); day-to-day ~60% hands-on coding, PR and architecture reviews, 10% mentoring, 30% cross-team coordination; full-stack case ownership across React surfaces and Java/Glide backend (update sets, source control, team dev, ATF); shadowed juniors on rotation.

Senior Software Engineer • Rippling, Bengaluru

Oct 2022 – Aug 2023

JavaScript, React, TypeScript, Node.js, Python, Playwright, Sentry, LogRocket

- Contributed to frontend infrastructure and global engineering initiatives; identified codebase problem areas, drove improvement proposals, interviewed candidates, and mentored junior engineers.

Lead Engineer • Reputation, Hyderabad

Sep 2020 – Sep 2022

JavaScript, Node.js, React, Python, RTK Query, Sumo Logic

- Led the Actions Team frontend, migrating the application from Angular to React and cutting page load time in half.
- Delivered the Actions feature and management dashboard; raised accessibility compliance from 80% to 95% for a broad user base.
- Built maintainable, scalable, and testable features; mentored junior developers and reviewed code.

Co-Founder / Lead Developer · Worktech Software, Hyderabad

Jul 2017 – Aug 2020

JavaScript, Node.js, MongoDB, Meteor, REST APIs

- Built products and services using JavaScript, Node.js, MongoDB, Meteor, and REST APIs.
- flexzone.in (2018-2020): aggregator of cafés into coworking spaces.
- hospeto.in (2017-2018): video consultation platform for doctors, with health record and billing management.

Senior Developer · Eze Software Group, Hyderabad

Jun 2016 – Jun 2017

REST APIs, MS SQL

- Developed and improved an order-management system for real-time trading related to short selling.
- Maintained EzeLocate and DataFeed for locating short inventory and real-time stock-data processing.

Project Leader · Oracle, Hyderabad

Jun 2010 – May 2016

Java, Oracle Database, Oracle ODI, SQL/PLSQL

- Developed and improved Plan Copy and Benefits Relationships systems using Java, Oracle Database, Oracle ODI, and SQL/PLSQL.
- Completed the Benefit Plan Copy project, reducing test-to-production HRMS data setup time by 80%.

PROJECTS

SpendIQ Copilot (live) — Conversational spend-analysis agent: LangGraph ReAct over SQLite + FTS5 with SQL guardrails (SELECT-only, read-only connections), an AST-whitelisted calculator instead of eval, and a 14-case golden-set eval harness with majority voting, all passing

ordo (live) — On-device vision-language model built on Qwen2-VL-2B with llama.cpp across a GGUF quantization ladder, deployed to iPhone (A16), with a private photo eval set, per-stage TTFT decomposition, and LoRA accuracy recovery

Revision (live) — Local-first Tauri desktop app for principal-level interview prep: FSRS-5 spaced repetition, drag & air gestures, single SQLite file, fully offline. DSA / system design / AI / behavioral decks with glassmorphic review, cloze + KaTeX, and 53-week analytics

EDUCATION

National Institute of Technology (NIT), Tiruchirappalli — Master of Computer Applications (MCA) · 2007-2010

Banaras Hindu University (BHU), Varanasi — BSc (Hons), Mathematics · 2003-2006

Abhishek Kumar Maurya · Hyderabad, India
