Abhishek Kumar Maurya

Staff Software Engineer — AI agent platforms, MCP and evals

Hyderabad, India +917842740174 akm.nitt@gmail.com github.com/xpressabhi linkedin.com/in/akm85

Immediately available; open to in-office, hybrid, or remote roles from Hyderabad

SUMMARY

Staff Software Engineer with 16+ years across the stack: agent architectures, tool orchestration, and evals first, backed by deep React/TypeScript frontend craft and hands-on Python/Java backend ownership. Founded ServiceNow's Agentic Developer Platform (adopted by 20+ teams via hands-on onboarding), led a 9-person engineering team there, and designs agent systems end-to-end — tool contracts and orchestration, eval-gated rollout (golden sets, LLM-as-judge), governance via AI Agent Studio, shipped ALA from requirements to GA. Ex-co-founder with direct client delivery experience; enterprise-grade UI with testing and accessibility.

SELECTED AI WORK

Agentic Developer Platform (ADP) `ServiceNow · Creator` — Multi-team bootstrap and governance infrastructure for Claude Code, MCP servers, agents, and skills. Built in four weeks on a multi-agent orchestration pattern, rolled out to 7 pilot squads across 20+ teams with 20+ skills and 20+ agents.

MCP-driven engineering workflows `ServiceNow · 20+ teams` — Integrated MCP-driven agentic workflows into the engineering lifecycle organization-wide. Reduced research and debugging effort by approximately 95% while improving accuracy.

Build Agent, ServiceNow Studio `ServiceNow · App Engine` — Elevated App Engine with agentic workflows for AI-assisted application creation, flow generation, and tool orchestration across 35+ metadata types and 11 domains. Built on the planning pattern (think first, then execute) with a metadata-aware, multi-model (Claude default; Now LLM + Claude on Bedrock), self-healing agentic architecture.

Release lifecycle & app summary agents `ServiceNow · Now Assist for Creator` — Automated delta analysis, human-readable release notes, and CAB-ready deployment manifests: documentation time from hours to a single click. Built on the REAct agentic framework (reason → act → observe). Ships as the Release lifecycle documentation agent in Now Assist for Creator.

SKILLS

AI & AGENTIC ENGINEERING

AI agents, Agent UIs, MCP workflows, Claude Code, LLM APIs (Anthropic, OpenAI, Gemini), LangChain / LangGraph, Prompt engineering, Tool orchestration, Multi-model systems, Multi-agent orchestration, REAct agents, LLM evals (golden sets, LLM-as-judge), Agent evaluation & guardrails, Human-in-the-loop agent design (plan → approve → execute → verify), AI governance (AI Agent Studio / Control Tower), RAG / keyword retrieval (BM25, FTS5)

FRONTEND & PLATFORM

JavaScript (ES6+), TypeScript, React, Next.js, Redux Toolkit, RTK Query, Node.js, Webpack, Vite, PWA

BACKEND & DATA

Python, FastAPI, SQLite, Java, REST APIs, MongoDB

ARCHITECTURE

System design, Scalable frontend architecture, Design patterns, Developer productivity, Metadata-driven development

RELIABILITY & QUALITY

Jest, React Testing Library, Playwright, Performance optimization, Performance profiling & tuning (production regressions, budgets), WCAG / ARIA accessibility

CI/CD & TOOLING

GitHub Actions, Jenkins, Docker

OBSERVABILITY

Sentry, LogRocket, Datadog, Sumo Logic, Agent observability (reasoning traces, tool-selection errors, cost/latency), On-call & incident command

WORK EXPERIENCE

Staff Software Engineer · ServiceNow, Hyderabad

`Oct 2023 – Aug 2026`

AI Agents, MCP, Python, TypeScript, React, Node.js, Java

— Designed ALA's agent architecture (tool contracts, delta-analysis flow, eval checks); built requirements to delivery; EA Mar 2026, GA Apr 2026; one-click release notes and update-set descriptions, CAB-ready.

— Set the consolidation architecture: App Summary from Now Assist skills to AI Agent Studio; one generic flow replacing 4-provider settings (Now LLM, Gemini, OpenAI, Anthropic) — less maintenance, smaller monthly model-change test surface.

— Legacy test coverage for update sets + source control + team dev: <20% to 95%, Feb–Mar 2026 in 4 weeks, using ADP; demoed to 7 teams, 20+ teams adopted.

— Stabilized inherited Table Builder and Workspace Builder (UI/API fixes); grew Table Builder entry points 1→4 (standalone homepage, legacy table/form-builder entry, App Engine, ServiceNow Studio); owned front-end performance for builder surfaces — production regressions, render and bundle hotspots, performance budgets.
— Instrumented agent quality in production (reasoning traces, tool-selection and hallucination error tracking, rollback paths, cost/latency dashboards feeding failures into evals) and shipped human-gated autonomy: chat → plan → explicit approval → execution → verification, with per-action approvals and rollback/hand-back paths — checkpoints structural, not advisory.
— Tech-lead 9-dev team on 2-week sprints (~8 team-wide customer cases/sprint); day-to-day ~60% hands-on coding, PR and architecture reviews, 10% mentoring, 30% cross-team coordination; full-stack case ownership across React surfaces and Java/Glide backend (update sets, source control, team dev, ATF); shadowed juniors on rotation.

Senior Software Engineer · Rippling, Bengaluru
Oct 2022 – Aug 2023

JavaScript, React, TypeScript, Node.js, Python, Playwright, Sentry, LogRocket

— Contributed to frontend infrastructure and global engineering initiatives; identified codebase problem areas, drove improvement proposals, interviewed candidates, and mentored junior engineers.

Lead Engineer · Reputation, Hyderabad
Sep 2020 – Sep 2022

JavaScript, Node.js, React, Python, RTK Query, Sumo Logic

— Led the Actions Team frontend, migrating the application from Angular to React and cutting page load time in half.
— Delivered the Actions feature and management dashboard; raised accessibility compliance from 80% to 95% for a broad user base.
— Built maintainable, scalable, and testable features; mentored junior developers and reviewed code.

Co-Founder / Lead Developer · Worktech Software, Hyderabad
Jul 2017 – Aug 2020

JavaScript, Node.js, MongoDB, Meteor, REST APIs

— Built products and services using JavaScript, Node.js, MongoDB, Meteor, and REST APIs.
— flexzone.in (2018-2020): aggregator of cafés into coworking spaces.
— hospeto.in (2017-2018): video consultation platform for doctors, with health record and billing management.

Senior Developer · Eze Software Group, Hyderabad
Jun 2016 – Jun 2017

REST APIs, MS SQL

— Developed and improved an order-management system for real-time trading related to short selling.
— Maintained EzeLocate and DataFeed for locating short inventory and real-time stock-data processing.

Project Leader · Oracle, Hyderabad
Jun 2010 – May 2016

Java, Oracle Database, Oracle ODI, SQL/PLSQL

— Developed and improved Plan Copy and Benefits Relationships systems using Java, Oracle Database, Oracle ODI, and SQL/PLSQL.
— Completed the Benefit Plan Copy project, reducing test-to-production HRMS data setup time by 80%.

PROJECTS

SpendIQ Copilot `(live)` — Conversational spend-analysis agent: LangGraph ReAct over SQLite + FTS5 with SQL guardrails (SELECT-only, read-only connections), an AST-whitelisted calculator instead of eval, and a 14-case golden-set eval harness with majority voting, all passing

ordo `(live)` — On-device vision-language model built on Qwen2-VL-2B with llama.cpp across a GGUF quantization ladder, deployed to iPhone (A16), with a private photo eval set, per-stage TTFT decomposition, and LoRA accuracy recovery

Revision `(live)` — Local-first Tauri desktop app for principal-level interview prep: FSRS-5 spaced repetition, drag & air gestures, single SQLite file, fully offline. DSA / system design / AI / behavioral decks with glassmorphic review, cloze + KaTeX, and 53-week analytics

EDUCATION

National Institute of Technology (NIT), Tiruchirappalli — Master of Computer Applications (MCA) · 2007-2010
Banaras Hindu University (BHU), Varanasi — BSc (Hons), Mathematics · 2003-2006

Abhishek Kumar Maurya · Hyderabad, India
